FIGURE ?

U.S. Serial No. 10/532,474

---Timestamp

TI-start-time in seconds (since 1970 GMT)

DU-duration of validity (for time grouping)

---Structural Fields

GB-indicator that this row is an output of grouping operation

MP-indicator that this row is a mapping or lookup row --- Key Fields (this category includes Secondary Key Fields):

CD-collection device (i.e. origin of the data)

DA-destination MAC address (as. stated by ARP packet)

DD-destination domain (DNS style)

DI-destination IP number

DM-destination MAC address (true MAC address)

DN-normalised destination address

DP-destination TCP port or UDP port

EP-Ethernet protocol number

PR-IP protocol number

SA-source MAC address (as stated by ARP packet)

SD-source domain (DNS style)

SI-source IP number

SM-source MAC address (true MAC address)

SN-normalised source address

SP-source TCP port or UDP port

---Secondary Key Fields (actually, special case of Key Fields)

TF-traffic flow

AC-account category

SA-sub-account category

CC-cost centre category

---Counter fields

BY-count of bytes

PK-count of packets

HT-count of web hits
